

Metal Bubbler Nozzle

RG2352

Details

Some fragile plants and flowers require a lighter touch. This bubbler delivers water into the soil, preventing erosion and water waste. Protect your plants and the dirt around them with a soft, bubbling flow of water that quickly absorbs into the ground. Spot-water garden beds, container gardens, vegetables and flowers with a flow aimed directly at the roots, without disturbing surrounding soil. Attach to end of hose to allow water to gently soak into ground without erosion. Ideal for watering delicate plants that will not tolerate direct spray.

- Gently soak bedding plants without erosion
- Metal Nozzle
